

Case Study: Economic Analysis – Benefits of High School Reform in the United States

Client Description

The client is a prominent think-tank based in Washington, D.C.

Client's Requirement & Objectives

The think-tank approached our associate consulting firm to provide a readily understandable analysis of the economic costs of the nation's present high school system and to show the reasonable economic benefits that are created by instituting change. The objectives included a brief analysis in a number of subject areas that would attract public interest, and Information and analysis specific to each state

infoAnalytica's Role

infoAnalytica conducted a comprehensive research, gathered information and presented its analysis in different areas:

- Our team assisted on a comprehensive four-month long research study.
- Extensively researched and studied similar studies by other organizations/entities
- Reviewed and analyzed issues/state of current thinking
- Defined economic and education parameters; researched exhaustive historic data
- Assisted in development of a customized cause-and-effect model based on the educational and economic metrics as defined by the various analyses and research efforts
- Based on the cause-and-effect model, highlighted correlations and relationships between education and economy-related variables.

Value Proposition

The client gained comprehensive insight into the correlation between higher spending on high school reforms and the subsequent economic benefits to the states. The client presented these insights to the U.S. Government.
